

Admin On-Demand

Service géré par Mosyle, l'admin on-demand permet à un utilisateur d'obtenir des droits d'administration sur son Mac pendant 5 minutes.

Mosyle offre deux possibilités d'applications pour l'admin on-demand :

- soit il s'applique à un utilisateur, qui obtient la possibilité d'administrer n'importe quel ordinateur Mac lié à notre instance Mosyle. ⇒ nous ne retenons pas cette option.
- soit il s'applique à une machine, et tous les utilisateurs qui y ouvrent une session peuvent faire la requête de droits d'administration. ⇒ c'est ce que nous appliquons.

1- Pour l'activer sur un poste, se rendre sur l'interface Mosyle (<https://mybusiness.mosyle.com/#>), onglet "Sécurité", rubrique "Admin On-Demand", sous rubrique "Settings". Cliquer sur "Config Admin On-Demand", puis à droite le bouton "Select" pour ajouter un poste.

The screenshot shows the Mosyle Admin interface. The top navigation bar includes links for Dashboard, Organization, Management, Security (which is highlighted with a green box), DNS Filtering, Support, and user session information. Below the navigation is a sidebar with sections for Manage macOS, Mac Security Overview, Hardening & Compliance, Detection & Removal 2, Admin On-Demand (which is selected and has a green box around it), and Automated Zero Trust (Beta). The main content area is titled 'Settings' and contains a 'Add new profile' button. It features filters for 'All User Group(s)' and 'All Device Group(s)'. A search bar is present, and a 'Config Admin-on-Demand' section is shown with a green box around its toggle switch, which is set to 'On'. To the right, a modal window titled 'Settings Profile' (Last Modified: 10 months and 23 days ago (v11)) is open. It shows a 'Profile Name' field containing 'Config Admin-on-Demand' with a file icon. Below it are tabs for 'Convert Current Admin' and 'Privileges (NEW)', with 'Privileges' being the active tab. A dropdown menu says 'Do not convert Admin users to S'. There's also a checkbox for 'Show on Mosyle Embark' and a note explaining how to enable or manage settings for Mosyle Embark. The 'Profile Assignment' section allows selecting specific devices, with a 'Select' button and a count of '50 device(s)'. Buttons for '+ Add Assignment', 'Save', and 'Delete' are at the bottom. A small note at the bottom right of the main content area says: 'To enable or manage settings for Mosyle Embark, go to Organization > Apple Basic Setup > Enrollment > Automated Device Enrollment and edit your enrollment profiles.'

2- Une fenêtre de recherche s'ouvre : chercher le nom du poste, le cocher dans la liste et valider la sélection avec la coche en haut de la fenêtre

3- Valider l'ajout de l'ordinateur en cliquant sur "Save" au bas des "Settings".

Si le mac visé est connecté à internet, l'inscription est répercutée en quelques minutes seulement. Voir ci-dessous le template de communication pour indiquer à l'utilisateur comment trouver et utiliser cette fonction.

Having Administrator privileges on your Mac at all times may not be necessary considering it's not often used, and can create a significant security risk in the event your device is subject to an attack.

Using this tool you can elevate your privilege only when needed.

Click the button below to start your user privilege escalation. This will temporarily escalate your user account to Admin to complete the necessary tasks, and automatically revert the account after the time period defined below by your organization.
